The Doctor's PDA and Smartphone Handbook: A Guide to Handheld Healthcare Mohammad Al-Ubaydli,2006-04-12

Handheld computers, or PDAs, are computers small enough to hold in your hand or fit into your pocket. Smartphones are PDAs which also allow the user to make and receive phone calls. For doctors, PDAs are possibly the most clinically appropriate of all the computer devices created. This is an essential guide for doctors wishing to maximise the potential of their PDA or smartphones and is the only book available to address the specific needs of doctors in relation to PDAs and smartphones. The Doctor's PDA & Smartphone Handbook is a step by step guide which introduces readers to the basics of PDAs. Comprehensive in its approach and easily accessible to those with no technical knowledge, the first few chapters demonstrate how the devices are used and how effective they can be in day-to-day clinical care and in training activities. Communication and sharing data and clinical information is enhanced if the full team is equipped with PDAs, and later chapters discuss more advanced uses and issues that should be considered if planning to equip the whole team. The text is accompanied by invaluable teaching videos and vignettes illustrating how teaching points covered in each chapter can be applied to realistic scenarios.

Rational Homotopical Models and Uniqueness Martin Majewski,2000 The main goal of this paper is to prove the following conjecture of Baues and Lemaire: the differential graded Lie Algebra associated with the Sullivan model of a space is homotopy equivalent to its Quillen model. In addition we show the same for the cellular Lie algebra model which we build from the simplicial analog of the classical Adams-Hilton model. It turns out that this cellular Lie algebra model is one link in a chain of models connecting the models of Quillen and Sullivan. The key result which makes all this possible is Anick's correspondence between differential graded Lie algebras and Hopf algebras up to homotopy. In addition we show that the Quillen model is a rational homotopical equivalence, and we conclude the same for the other models using our main result. The construction of the three models is given in detail. The background from homotopy theory, differential algebra, and algebra is presented in great generality.

Externalization Yoshihito Dobashi, 2019-09-17 This book explores theoretical issues of the syntax-phonology interface within the Minimalist Program of linguistic theory and proposes an entirely new approach to prosodic categories. Conceptual as well as empirical questions are addressed, concerning how syntactic objects are mapped to the sensorimotor system through the processes of externalization. Elaborating on recent progress in the theories of labelling and workspace-based syntactic derivation, this book further develops a null theory of the prosodic domains, and recasts these as the domains of interpretation that are reducible to more fundamental concepts of linguistic theory. Phonological phrases are characterized by Minimal Search, a third factor principle of efficient computation. Intonational phrases are taken to be reflexes of the termination of syntactic derivation, which is formulated in terms of the workspace to which MERGE applies. This book explores the new implications this theory has for the general architecture of grammar as well as for linguistic interfaces. It provides a comprehensive review of the development of theories of the syntax-phonology interface from over the past three decades. The book is well-suited for general linguistic readers as well as phonologists, syntacticians, and any linguist interested in interface research.
